BLOCK NONCE #12: The Boy Scout Principle

❖ What?

The "Boy Scout principle" is the concept of leaving things better than you found them.
In code that means — when you're already working on something, don't ignore the mess nearby.

❖ Why?

The code belongs to everyone, so every improvement you make helps the whole team.
If each of us sees our tasks not just as individual work, but as part of a shared goal — we'll build a better product :)

❖ How?

1. Fix that outdated comment that no longer makes sense.
2. Rename the variable that made you squint for 3 minutes.
3. Delete that ancient `// FIXME`.
4. Remove the TODO tagged with someone who left a year ago.
5. Add documentation where it's missing.

Remember- nothing is too small and the maximum size is up to you.

> **TIP**💡 Try applying this rule in your life too.

> **Call For Action!**📣 🧹
> Pick one of your open PRs and add a tiny cleanup. Your Good Boy Scout badge is waiting!🎖️
